FHFGD Ref. No.: 10368.0002-00

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the

application:

(Currently amended) A storage device, comprising:

a cache array having cache lines filled with contiguous instructions in an

instruction cache (ICache) portion that is adjacent to a trace cache (TCache) portion

where wherein:

cache lines are filled with elements of a trace, where trace; and

neither the ICahce portion nor the TCache portion are looked-up when the

TCache portion is supplying instructions: instructions; and

an instruction indexing logic, wherein the indexing logic is not used for either the

ICache portion or TCache portion when the TCache portion is supplying instructions.

2. (Currently amended) The storage device of claim 1 further including an

indexing logic where wherein the ICache portion is looked-up using the indexing logic

when the TCache portion is not supplying instructions.

(Canceled).

(Original) The storage device of claim 1 wherein a line in the TCache

portion is indexed when a branch instruction is executed.

-2-

FHFGD Ref. No.: 10368.0002-00

5. (Original) The storage device of claim 1 wherein the TCache portion

contains non-contiguous instructions from an instruction stream.

(Currently amended) A system, comprising:

a processor:

at least one antenna first and second antennas to receive modulated signals and

supply a signal to the processor; and-

a cache having in one array both an instruction cache (ICache) portion and a

trace cache (TCache) portion, where a line in the TCache portion is not looked-up when

the TCache portion is supplying instructions, instructions; and

an instruction indexing logic, wherein the indexing logic is not used for either the

ICache portion or TCache portion when the TCache portion is supplying instructions.

7. (Previously presented) The system of claim 6 wherein the TCache portion

is indexed when the processor takes a branch, a jump, a call or a return.

8. (Currently amended) The system of claim 6 further including an indexing-

legic where wherein the ICache portion is looked-up using the indexing logic when the

TCache portion is not supplying instructions.

(Canceled).

-3-

FHFGD Ref. No.: 10368.0002-00

(Currently amended) A method, comprising:

intermingling cache lines in one array of a cache where a first cache line in a trace cache (TCache) portion is physically adjacent a second cache line in an instruction cache (ICache) portion and selecting the TCache or the ICache portion based on an address of the next instruction, instruction; and

using an instruction indexing logic to select some instructions, wherein the indexing logic is not used for either the ICache portion or TCache portion when the TCache portion is supplying instructions.

11. (Original) The method of claim 10, further including:

dynamically changing a number of lines in the ICache portion and the TCache portion.

(Original) The method of claim 10, further including:

dynamically altering a size of the ICache portion and the TCache portion in the one array as time progresses.

- (Original) The computer system of claim 10, further including: supplying a program-order stream of instructions from each cache line in the TCache portion.
  - 14. (Original) The computer system of claim 10, further including:

supplying instructions in program order from cache lines in the ICache portion until a branch is encountered.

- 15. (Original) The computer system of claim 10, further including: associating a next address with the first cache line in the TCache portion to allow a next line to be ready before a current line is completely fetched.
  - 16. (Currently amended) A method comprising:

filling an array with instruction cache (ICache) cache lines mixed with trace cache (TCache) cache lines where an allocated proportion of ICache cache lines to TCache cache lines is dynamically changing with time and neither the ICache portion nor the TCache portion are looked-up when the TCache portion is supplying instructions.

## instructions; and

using an instruction indexing logic to select some instructions, wherein the indexing logic is not used for either the ICache portion or TCache portion when the TCache portion is supplying instructions.

17. (Original) The method of claim 16, comprising:

using an address of a next instruction when an end of a cache line is reached to determine use of the ICache cache lines or the TCache cache lines.

18. (Original) The method of claim 16, comprising:

FHEGD Ref. No.: 10368 0002-00

searching both the ICache cache lines and the TCache cache lines when an

19. (Original) The method of claim 16, comprising:

address is a result of a branch target.

using the TCache cache lines when an address is found in the TCache cache lines.

20. (Original) The method of claim 19, comprising:

using the ICache cache lines when the address is found in the ICache cache lines and not in the TCache cache lines.

- (New) The method of claim 1, wherein the ICache and TCache portions
  may migrate within the cache as time progresses.
- (New) The system of claim 6, wherein the at least one antenna comprises a Radio Frequency (RF) transceiver.
- (New) The system of claim 6, further comprising a control circuit to control the storage and retrieval of data words stored in the cache.
- (New) The system of claim 6, wherein the TCache line size is a multiple of the ICache line size.

FHFGD Ref. No.: 10368.0002-00

 (New) The system of claim 6, wherein the ICache and TCache portions may migrate within the cache as time progresses.

- 26. (New) The method of claim 10, wherein the ICache portion is looked-up using the indexing logic when the TCache portion is not supplying instructions.
- (New) The method of claim 10, wherein the TCache line size is a multiple
  of the ICache line size.
- (New) The method of claim 10, wherein the ICache and TCache portions may migrate within the cache as time progresses.
- (New) The method of claim 16, wherein the ICache portion is looked-up using the indexing logic when the TCache portion is not supplying instructions.
